Series LF 251-631 DN40-65 PN32

Assignment of connections and functions

- A: air bleeding G1/2
- B: air bleeding G1/2
- C: mini-measuring connection G1/4 dirt side
- D: mini-measuring connection G1/4 clean side
- E: drain G1/2 dirt side

1) Connection for the potential equalization, only for application in the explosive area.

Weight LF 251: approx. 14 kg Weight LF 401: approx. 21 kg Weight LF 631: approx. 29 kg

Dimensions: mm

Designs and performance values are subject to change.

Pressure Filter Series LF 251-631 DN40-65 PN32

Description:

In-line filters of the type LF 251-631 are suitable for a working pressure up to 32 bar. Pressure peaks are absorbed with a sufficient margin of safety. It can be used as suction filter, pressure filter and return-line filter.

The filter element consists of star-shaped, pleated filter material, which is supported on the inside by a perforated core tube and is bonded to the end caps with a high-quality adhesive. The flow direction is from outside to inside.

For cleaning the stainless steel mesh element (see special leaflets 21070-4 and 39448-4) or changing the filter element, remove the cover and take out the element. The mesh elements are not guaranteed to maintain 100% performance after cleaning.

For filtration finer than 40 μm , use the disposable elements made of microglass. Filter elements as fine as 5 µm(c) are available; finer filter elements are available upon request.

Eaton filter elements are known for a high intrinsic stability and an excellent filtration capability, a high dirtretaining capacity and a long service life.

Eaton filter can be used for petroleum-based fluids, HW emulsions, water glycols, most synthetic fluids and lubrication fluids. Consult factory for specific fluid applications.

Ship classifications available upon request.

Accessories:

- gauge port and bleeder connection, see sheet-no. 1650
- drain- and bleeder connection, see sheet-no. 1651
- SAE-counter flanges, see sheet-no. 1652

Technical data:

design temperature: -10 °C to +100 °C operating temperature: -10 °C to +80 °C

operating medium: mineral oil, other media on request

max. operating pressure: 32 bar test pressure: 64 bar max. operating pressure with IS20: 16 bar test pressure with IS20: 32 bar

process connection: SAE-flange connection 3000 PSI

housing material: EN-GJS-400-18-LT

sealing material: Nitrile (NBR) or Viton (FPM), other materials on request

installation position: vertical measuring connections: G ½ drain- and bleeder connections: G ½ volume tank LF 251: 2,4 I LF 401: 3,6 I LF 631: 5,3 I

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3. Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

Pressure drop flow curves:

Filter calculation/sizing

The pressure drop of the assembly at a given flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

 $\Delta p_{assembly} = \Delta p_{housing} + \Delta p_{element}$ $\Delta p_{housing} = (see \Delta p = f(Q) - characteristics)$

$$\textit{\Deltap}_{\textit{Element}} \textit{(mbar)} = Q \left(\frac{l}{min} \right) x \; \frac{\textit{MSK}}{10} \left(\frac{mbar}{l/min} \right) \; x \; \nu \left(\frac{mm^2}{s} \right) \; x \; \frac{p}{0,876} \; \left(\frac{kg}{dm^3} \right)$$

For ease of calculation our Filter Selection tool is available online at www.eatonpowersource.com/calculators/filtration/

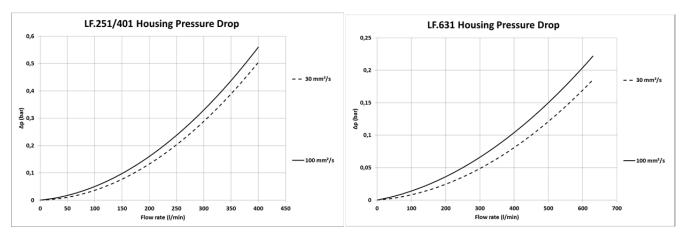

Material gradient coefficients (MSK) for filter elements

The material gradient coefficients in psi/gpm apply to mineral oil (HLP) with a density of 0,876 kg/dm³ and a kinematic viscosity of 30 mm²/s (139 SUS). The pressure drop changes proportionally to the change in kinematic viscosity and density.

LF	VG				G				API		
	3VG	6VG	10VG	16VG	25VG	25G	40G	80G	130G	10API	25API
251	0,931	0,646	0,414	0,360	0,246	0,0277	0,0258	0,0177	0,0131	0,212	0,097
401	0,571	0,397	0,254	0,221	0,151	0,0169	0,0158	0,0108	0,0080	0,130	0,059
631	0,436	0,303	0,194	0,169	0,115	0,0142	0,0132	0,0091	0,0067	0,099	0,045

$\Delta p = f(Q)$ – characteristics according to ISO 3968

The pressure drop characteristics apply to mineral oil (HLP) with a density of 0,876 kg/dm³. The pressure drop changes proportionally to the density.

Symbols:

without indicator

with electric indicator AE 30 and AE 40

with visual-electric indicator AE 50 and AE 62

with visual-electric indicator AE 70 and AE 80

with visual indicator AOR/AOC/OP

with visual-electric indicator OE

with electronic sensor VS5

item 12 execution only without clogging indicator or clogging sensor

Test methods:

Filter elements are tested according to the following ISO standards:

ISO 2941 Verification of collapse/burst resistance
ISO 2942 Verification of fabrication integrity
Verification of material compatibility with

ISO 2943 Verification of material compatibility with fluids

ISO 3723 Method for end load test

ISO 3724 Verification of flow fatigue characteristics

ISO 3968 Evaluation of pressure drop versus flow characteristics ISO 16889 Multi-pass method for evaluating filtration performance
